

Table of Contents

Solar Photovoltaics : Fundamentals, Technologies & Applications

Chapter 1 Introduction

1.1	World energy requirement	2
1.2	Need for sustainable energy source	4
1.2.1	Limited fossil fuels	4
1.2.2	Environmental impact of fossil fuels	6
1.2.3	Energy security and potential for conflicts	6
1.3	Sustainable Sun's energy: advantages and challenges	7
1.3.1	Sun's Energy: advantages	8
1.3.2	Sun's energy: conversion challenges	8
1.3.3	Other energy alternative	9
1.4	The place of renewables sources in energy supply	10
1.4.1	Current status of wind energy technology	10
1.4.2	Current status of solar thermal technologies	11
1.4.3	Current status of biomass energy technologies	13
1.5	Place of photovoltaics in energy supply	14
1.5.1	Wafer based Si solar cell technologies	15
1.5.2	Thin film amorphous Si	16
1.5.3	Thin cadmium telluride (CdTe) and copper indium gallium selenide (CIGS) cell technologies	16
1.5.4	Thin film crystalline Si solar cell technologies	17
1.5.5	Other solar cell technologies	18
1.6	World production of Solar PV modules and cost	19
1.7	Outline of the book	20
Chapter 2: Fundamental Of Semiconductors 2		
2.1	Semiconductors as solar cell material	12
2.2	Arrangements of atoms in space	6
2.2.1	Types of units cells	8
2.2.2	Planes and directions in crystal	9
2.2.3	Lattice of solar cell materials..	12
2.3	Arrangements of electrons in atom	14
2.3.1	Bohr model of hydrogen atom	15
2.3.2	Quantum mechanics	17
2.3.3	Electronic arrangement of silicon atom	19
2.4	Formation of Energy Bands	20
2.4.1	Energy band mode	23
2.4.2	Metal, insulator and semiconductor	23
2.4.3	Direct and indirect band gap	24

Chapter 3: Charge carriers and their motion in semiconductor	1
3.1 Charge carriers in semiconductors	2
3.1.1 Bonding in semiconductors	2
3.1.2 Intrinsic semiconductor, electrons and holes	4
3.1.3 Extrinsic semiconductor, controlling carrier concentration	6
3.2 Carrier concentration and distribution	9
3.2.1 Density of energy states	9
3.2.2 The carrier distribution function	10
3.2.4 How many electrons and holes?	13
3.2.5 Electron and hole concentration in doped semiconductor	17
3.3 Carrier motion in semiconductors	18
3.3.1 Drift, motion due to electric field	18
3.4 Electric field and energy band bending	23
3.4.1 Diffusion, motion due to concentration gradient	24
3.4.2 Diffusion current density	25
3.4.3 Drift and diffusion together	26
3.4.4 Diffusion coefficient	29
3.5 Generation of carriers	30
3.6 Recombination of carriers	34
3.7 Continuity of carrier concentrations	43
Chapter 4:PN Jn and Solar cells	1
4.1 Why P-N junction diode?	2
4.2 Introduction to P-N junction: equilibrium condition	3
4.2.1 Space charge region	4
4.2.2 Energy band diagram	5
4.2.3 P-N junction potential	7
4.2.4 Width of depletion region	9
4.2.5 Carrier movements and current densities	10
4.2.6 Carrier concentration profile	12
4.3 P-N junction in non-equilibrium	13
4.3.1 P-N junction I-V relation: qualitative analysis	15
4.4 P-N junction I-V relation: quantitative analysis	19
4.4.1 Carrier injection	20
4.4.2 Diffusion of excess carriers	21
4.4.3 P-N junction I-V equation	23
4.4.4 Deviation from ideal behaviour	27
4.5 P-N junction under illumination: Solar cell	28
4.5.1 Generation of photovoltage	29
4.5.2 Light generated current	31
4.5.3 I-V equation of solar cells	32
4.5.4 Solar cell characteristics	33

Chapter 5: Design Of Solar cell **1**

5.1	Upper limits of parameters	2
5.1.1	Short circuit current	2
5.1.2	Open circuit voltage	3
5.1.3	Fill Factor	4
5.1.4	Efficiency	5
5.2	Losses in solar cells	6
5.2.1	Model of a solar cell	8
5.2.2	Effect of series and shunt resistance on efficiency	9
5.2.3	Effect of solar radiation on efficiency	10
5.2.4	Effect of temperature on efficiency	11
5.3	Solar cell design	12
5.3.1	Design for high I_{sc}	12
5.3.2	Design for high V_{oc}	21
5.3.3	Design for high FF	24
5.4	Analytical techniques	27
5.4.1	Solar Simulator: I-V measurement	27
5.4.2	Quantum efficiency (QE) measurement	28
5.4.3	Minority carrier lifetime and diffusion length measurement	31

Chapter 6: Production of Si **1**

6.1	Growth of Solar PV industry and Si requirement	1
6.2	Steps in producing Si wafers	4
6.3	Production of Metallurgical Grade Si (MGS)	5
6.4	Production of Electronics Grade Si (EGS)	7
6.4.1	High purity Si containing gases	7
6.4.2	Obtaining solid poly-Si	7
6.5	Production of Si wafers	9
6.5.1	Mono-crystalline Si ingots: CZ and FZ process	10
6.5.2	Multi-crystalline Si ingots	12
6.5.3	Wafer dicing: ID and Wire sawing	13
6.6	Si Sheets	15
6.7	Si Feedstock for solar cell industry	17
6.8	Solar grade Silicon	19
6.8.1	Low cost potential	19
6.8.2	Refining processes for Solar grade Si	20
6.8.3	Possible route for conversion of MG-Si to So G-Si	22
6.9	Summary of Si usage in Solar PV	23

Chapter 7 : Si Wafer Based Solar Cell Technology **1**

7.1	Development of commercial Si solar cells	1
7.1.1	Improvement from use of CZ single crystal, diffused junction and	

antireflective coating	2
7.1.2 Improvement from optimised junction, front metal and surface texturing	3
7.1.3 Use of screen printing, multi-crystalline Si and first terrestrial PV modules	4
7.2 Process flow of Commercial Si cell technology	5
7.3 Processes used in solar cell technologies	7
7.3.1 Saw damage removal and surface texturing	8
7.3.2 P-N Junction formation: the Diffusion	9
7.3.3 Thin-film layers for ARC and surface passivation	16
7.3.4 Metal contacts: pattern defining and deposition	18
7.4 High efficiency Si solar cells	21
7.4.1 Passivated emitter solar cells (PESC)	23
7.4.2 Buried contact solar cells	23
7.4.3 Rear point contact solar cells	24
7.4.4 Passivated emitter and rear contact	26
Chapter 8: Thin film solar cell technologies	1
8.1 Generic advantages of thin-film technologies	2
8.2 Materials for thin film technologies	3
8.3 Thin film deposition techniques	5
8.3.1 Evaporation	5
8.3.2 Sputtering	6
8.3.3 LPCVD and APCVD	8
8.3.4 Plasma enhanced CVD (PECVD)	8
8.3.5 Hot wire CVD (HWCVD)	9
8.3.6 Closed space sublimation (CSS)	10
8.3.7 Ion assisted deposition	11
8.4 Common features of thin film technologies	12
8.4.1 Use of transparent conductive oxide (TCO) and light trapping	12
8.4.2 Possible solar cell structures	15
8.4.3 Substrate and superstrate configuration	17
8.4.4 Thin film module manufacturing	18
8.5 Amorphous Si solar cell technology	20
8.5.1 Key aspects of material	21
8.5.2 Solar cell structure	25
8.5.3 Fabrication of solar cells	26
8.6 Cadmium telluride solar cell technology	30
8.6.1 Key material properties	30
8.6.2 Solar Cell structure	32
8.6.3 Fabrication of cells and modules	33
8.7 Chalcopyrite (CIGS) solar cell technology	34
8.8 Thin film crystalline Si solar cell technologies	37
8.8.1 Choice of substrate	39
8.8.2 Grain size and cell efficiency	40
8.9 Micro-crystalline Si thin film technology	41

8.9.1 Thin film Poly-crystalline Si solar cells	44
8.9.2 Large grain thin film crystalline Si (multi-crystalline Si) cells on foreign substrate	47
8.9.3 Thin film epitaxial Si solar cells	50
Chapter 9: Concentrator PV Cells and Systems	1
9.1 Light concentration	1
9.1.1 Opportunities	3
9.1.2 Challenges	5
9.2 Concentration Ratio	6
9.3 Series resistance optimization of concentrator cells	7
9.3.1 Calculation of resistance in bulk region	8
9.3.2 Resistance of the metal semiconductor contact	8
9.3.3 Resistance of the emitter layer	8
9.3.4 Resistance of the metal contacts	10
9.4 Optics for Concentrator PV (CPV)	11
9.4.1 V trough concentrator modules	12
9.4.2 Compound parabolic concentrator (CPC)	13
9.4.3 Paraboloid reflector	14
9.4.4 Fresnel's Lens Concentrator	14
9.5 Tracking Mechanisms for CPV	15
9.6 Cooling Requirements	16
9.7 Minority carrier injection under high concentration	20
9.8 High concentrator solar cells	21
9.8.1 Si solar cells for concentration	21
9.8.2 GaAs Solar cells	23
Chapter 10: Other Solar Cell Concepts	1
10.1 Organic solar cells	1
10.1.1 Material properties	2
10.1.2 Solar cell structure	3
10.1.3 Commonly used materials	4
10.2 Dyesensitised solar cells (DSC)	4
10.2.1 Operation of dye-sensitized solar cells	5
10.2.2 Materials and their properties	6
10.3 GaAs solar cells	9
10.4 Thermo-Photovoltaics (TPV)	9
10.5 Need to go beyond current cell technologies	13
10.6 Beyond single junction efficiency limit	14
10.7 Approaches to overcome single junction efficiency limit	17
10.7.1 Crystalline Si Multijunction solar cells	19
10.7.2 Intermediate band gap, Impurity PV and quantum well solar cells	22
10.7.3 Spectrum modification approaches: Up- and down photon energy conversion	24

10.7.4 Hot carrier solar cells	26
--------------------------------	----

Chapter 11: Solar Radiation	2
------------------------------------	----------

11.1 The Sun and the Earth	2
11.1.1 Extraterrestrial Solar Radiation	3
11.1.2 Solar spectrum at the Earth's surface	7
11.2 The Sun-Earth movement	11
11.2.1 Declination angle (\square)	15
11.2.2 Apparent motion of the Sun and solar altitude	17
11.3 Angle of Sun rays on solar collector	19
11.3.1 Local apparent time (LAT)	21
11.3.2 Sunrise, Sunset and Day length	22
11.3.3 Path of Sun's motion	24
11.3.4 Optimal angle for fixed collector surface	25
11.3.5 Optimal inclination of collector in summer and winter	27
11.4 Sun tracking	29
11.4.1 Two axis tracking	30
11.4.2 One axis tracking	30
11.4.3 Vertical axis or azimuth tracking	30
11.4.4 Rotation around horizontal E-W axis & movement in the N-S direction	32
11.4.5 Rotation around horizontal N-S & movement in E-W direction	34
11.4.6 Rotation around inclined N-S axis and movement in the E-W direction	35
11.5 Estimating solar radiation empirically	36
11.5.1 Monthly average daily global radiation on horizontal Surface	37
11.5.2 Monthly averaged daily diffuse radiation on horizontal surface	39
11.5.3 Monthly averaged hourly global and diffuse radiation on horizontal surface	40
11.5.4 Solar radiation on tilted surface	40
11.6 Measurement of solar radiation	42

Chapter 12: Solar Photovoltaic Modules	1
---	----------

12.1 Solar PV modules from solar cells	1
12.1.1 Series and parallel connection of cells	2
12.1.2 Mismatch in cell/module	4
12.2 Mismatch in series connection	5
12.2.1 Hot spots in the module	7
12.2.2 Bypass diode	9
12.3 Mismatching in parallel connection	11
12.4 Design and Structure of PV modules	14
12.4.1 Number of solar cells in a module	14

12.4.2	Wattage of modules	15
12.4.3	Fabrication of PV modules	16
12.5	PV module power output	20
12.5.1	I-V equation of PV modules	20
12.5.2	Ratings of PV modules	22
12.5.3	I-V and power curve of module	24
12.5.4	Effect of solar irradiation	25
12.5.5	Effect of temperature	26
Chapter 13: Balance of Solar PV Systems		1
13.1	Basics of Electrochemical Cell	2
13.1.1	Introduction to Batteries	2
13.1.2	Elements of a electro-chemical cell	2
13.1.3	Operation of an electrochemical cell	3
13.1.4	Theoretical cell voltage and capacity	5
13.1.5	Losses in a cell	6
13.1.6	Battery Classification	8
13.1.7	Cell to battery	8
13.1.8	Battery Parameters	9
13.2	Factors affecting battery performance	11
13.2.1	Battery voltage level	12
13.2.2	Battery discharge current	13
13.2.3	Battery temperature during discharge	13
13.2.4	Choice of a battery	13
13.2.5	Battery charging and discharging methods	14
13.3	Batteries for PV Systems	17
13.3.1	Lead-acid Batteries	17
13.3.2	Nickel-Cadmium (Ni-Cd) Batteries	19
13.3.3	Comparison of batteries	21
13.4	DC to DC converters	22
13.4.1	Buck type DC to DC converter	23
13.4.2	Boost type DC to DC converter	26
13.4.3	Buck-boost type DC to DC converter	27
13.4.4	Control of DC to DC converters	29
13.4.5	Input side reflected impedance of the DC to DC converters	30
13.4.6	Higher order DC to DC converters	30
13.5	Charge Controllers	32
13.5.1	Commonly used set points	33
13.5.2	Types of charge controllers	34
13.6	DC to AC Converter (Inverters)	36
13.6.1	Single phase DC to AC converter	36
13.6.2	Three phase DC to AC converter	41
13.6.3	Inverter with pulse with modulation	42
13.7	Maximum Power Point Tracking (MPPT)	43
13.7.1	Hill climbing method	46
13.7.2	Incremental conductance method:	47

13.7.3 Constant voltage method:	48
---------------------------------	----

Chapter 14: Photovoltaic System Design and Applications	1
--	----------

14.1 Introduction to solar PV systems	2
14.2 Standalone PV System Configurations	3
14.2.1 Type-a: Unregulated standalone system with DC load	3
14.2.2 Type-b: Regulated standalone system with DC load	3
14.2.3 Type-c: Regulated standalone system with battery and DC load	4
14.2.4 Type-d: Regulated standalone system with battery and AC/DC load	4
14.2.5 Type-e: Regulated hybrid standalone system with AC/DC load	4
14.2.6 Type-f: Regulated grid connected system without energy storage	5
14.3 Design Methodology of PV Systems	8
14.3.1 Design of PV powered DC fan without battery (type-a configuration)	8
14.3.2 Regulated standalone system with DC load using MPPT (type-b configuration)	10
14.3.3 Design of PV powered DC pump	10
14.3.4 Design of regulated standalone system with battery and AC/DC load	14
14.4 Wire sizing in PV systems	23
14.5 Precise Sizing of PV systems	24
14.6 Hybrid PV Systems	26
14.6.1 Why hybrid systems?	26
14.6.2 Types of hybrid PV Systems	27
14.6.3 Issues with Hybrid Systems	32
14.7 Grid connected PV systems	33
14.7.1 Configuration and Working of an example single-stage grid connected PV systems	37
14.8 Simple payback period	38
14.9 Life Cycle Costing (LCC)	40
14.9.1 Time value of money	40
14.9.2 Present worth of future one time investments	41
14.9.3 Present worth of future recurring investments	42
14.9.4 Life Cycle Cost	43
14.9.5 Annualized LCC (ALCC)	44
14.9.6 Unit cost of generated electricity	45
